-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 14-16 are rejected under 35 U.S.C. 102(b) as being anticipated by US 5,292,613 (US '613). US '613 discloses a photosensitive transfer material and a process of making a color filter utilizing the same, the transfer material comprising a temporary support having formed thereon in sequence a thermoplastic resin layer, a separating layer (corresponding to the intermediate layer of the present invention), and a photosensitive resin layer, wherein the adhesion between the thermoplastic resin layer and the separating layer is weakest. See the abstract; column 1, lines 6-16; and column 18, lines 55 to column 19, line 30. Additionally, to prevent the occurrence of static electricity, an electrically conductive layer is formed on at least one surface of the temporary support, or electrical conductivity is imparted to the temporary support itself. See column 9, line 35 to column 12, line 45. It is the position of the Examiner that US '613 inherently meets the “absolute value of a surface potential limitation” of the present invention because it is taught that the provision of an electrically conductive element prevents the occurrence of static electricity, i.e. the surface potential after separation is essentially zero.

***Allowable Subject Matter***

2. Claims 4-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John A. McPherson whose telephone number is (571) 272-1386. The examiner can normally be reached on Monday through Friday, 8:00 AM to 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Huff can be reached on (571) 272-1385. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
